

HARBORS BARCELONA

Re-sewing Blue Nature and Culture

A STORY BETWEEN PARIS AND BARCELONA

The HARBOR project was born in 2022 in Paris with the idea of revitalising the banks of the Seine and re-establishing a relationship with the river through the co-construction of wooden boats inspired by the 19th century by various vulnerable social groups. For 9 months, HARBORS BCN took up the torch and reproduced its working and activation methods in Barcelona. The project involved around sixty children and young teenagers in their search for a rediscovered relationship with the maritime history of Barcelona and the ecological challenges of the Mediterranean Sea. During this period, their activities were divided between meetings, visits and a shipyard set up in their school to build a small wooden dinghy for 6 weeks!

The adventure will be celebrated on Saturday 11 May on the beach in Barcelona when the boat is launched for its maiden voyage in a Social Regatta!
Come and join us!
